Career Objectives

I've been a Full Stack Developer for more than 6 years, specializing in Laravel. I want to use my experience to work on exciting projects and be part of great teams. I love working with Laravel.

Skills

Project Experiences

Title: FDA Esubmission Myanmar

Domain: <https://esubmission.fda.gov.mm>

Languages: PHP, Laravel ,HTML, CSS, Sass, Bootstrap, JavaScript, jQuery, MySQL, API, livewire

Description: Developed Myanmar FDA's regulatory system with modules for Food, Drug, Cosmetic, and Medical Device certificates. The Food module facilitates seamless registration and compliance for food products, the Drug module focuses on pharmaceuticals, the Cosmetic module caters to beauty products, and the Medical Device module certifies equipment. Integrated features for payment processing, laboratory testing, and budget reporting, enhancing overall efficiency. This enhances efficiency, contributing to public health and safety standards.

Title: HRMS System

Languages: PHP, Laravel ,HTML, CSS, Sass, Bootstrap, JavaScript, jQuery, MySQL, API

Description: Create, update, and manage employee profiles with essential details, including personal information, contact details, and job-related data. Implement a robust training system to schedule, track, and evaluate employee training programs. Generate reports on training progress and identify areas for improvement. Design a module for assessments and performance evaluations. Provide tools for employees and managers to set goals, track progress, and assess performance regularly. Develop a user-friendly leave management system, allowing employees to request leave and managers to efficiently approve or reject requests. Integrate a calendar view for easy tracking of team availability and leave schedules. Implement a secure and efficient payroll system to automate salary calculations, deductions, and tax compliance. Generate detailed payroll reports and ensure transparency in financial transactions. This HRMS is designed to be accessed only within the local network and won't require a public IP address.

Title: Post Market Surveillance

Languages: PHP, Laravel ,HTML, CSS, Sass, Bootstrap, JavaScript, jQuery, MySQL, API

Description: This project focuses on surveilling food, drug, cosmetic, and medical device products, whether they possess a license or not. The surveillance includes checking the validity of certificates and specifications to ensure the products meet regulatory standards.

Title: POS System, Online Shop System

Languages: PHP, Laravel ,HTML, CSS, Sass, Bootstrap, JavaScript, jQuery, MySQL
